

Flying Number Line

Print off this sheet, cut out each aeroplane and use them to try out these activities to help your child recognise, order and understand the values of the numbers from 0 to 10.

- Ask your child to place the aeroplanes in ascending order, starting with 0. Count along the number line out loud with your child. Now try it with descending numbers, from 10 down to 0.
- Using some small objects - counters, coins, straws, or anything else you have to hand that grabs your child's fancy - ask your child to pick an aeroplane and count out that number of objects.
- Give your child a number of objects between 1 and 10. Ask them to count them and then pick out the corresponding number card.
- With the aeroplanes laid out from 0 to 10, ask your child to cover their eyes while you remove a number. Ask your child to tell you which one is missing. Next time, try swapping over 2 of the numbers and ask your child to spot which ones have been switched.
